

## **Health Facility Guidelines**

## **Template - Role Delineation Matrix**

## XYZ Hospital, Sharjah Healthcare City

## Introduction:

Role Delineation refers to a level of service that describes the complexity of the clinical activities undertaken by that service. The level is determined by the presence of medical, nursing and other health care personnel who hold qualifications compatible with the defined level of care.

Each level of service has associated minimum standards, support services and staffing profiles considered appropriate.

Role Delineation is a process that ensures that clinical services are provided safely and are appropriately supported by the provision of adequate staffing numbers and profiles, minimum safety standards and other requirements.

Levels of service range from 1–6 for each major clinical activity or support service associated with health facilities, with Level 0 referring to the lowest complexity service and Level 6 describing the most complex.

Those services not identified will generally follow the Role Delineation of the particular hospital or facility they are applicable to. A hospital or health care facility is deemed to be at a particular level when the majority of clinical and support services provided are of that particular level.

<b>ROLE</b> I	DELINEATION LEVEL (RDL) – INPATIENT SERVICES
1	Outpatient care – RN and visiting GP. In remote areas possibly support via telephone
2	Outpatient and inpatient care – plus 24-hour GP cover and limited visiting general specialists for outpatient services only
3	Outpatient and inpatient care – plus visiting general specialists (low risk obstetrics and elective surgery)
4	Outpatient and inpatient care – plus resident general specialists, visiting Type I subspecialists, junior medical staff
5	Outpatient and inpatient care – plus visiting Type II subspecialists, some medical staffing, High Dependency Unit (HDU). May include some research and training.
6	Statewide services, including Type II subspecialists and research/education/training

ROLE I	DELINEATION LEVEL (RDL) – AMBULATORY CARE SERVICES
1	GP only
2	GP and outpatient clinic at discharge hospital; limited access to generalist domiciliary nursing
3	Visiting specialists; some hospital avoidance/hospital substitution; some early discharge services; access to generalist domiciliary nursing and some allied health
4	Links with Home and Community Care services; Increasing range and complexity of hospital avoidance/substitution/early discharge; chronic disease programs; visiting medical specialist; good access to generalist allied health/nursing staff
5	Specialist medical/nursing/allied health staff; increased range and complexity; HACC integration; enhanced diagnostics; teaching and training role
6	Research role; fully integrated ambulatory care services; fully integrated diagnostics
